Scaling Up with AI

A Virtual Workshop for Business Owners and Leadership Teams

AI is already impacting your business—whether you've made a plan or not.

This virtual workshop is designed to help you **cut through the noise**, **reduce confusion**, and **understand how AI actually fits into your growth strategy**—without disrupting what's already working.

This is not about becoming an AI expert.

It's about becoming a **clear-thinking leader** in an AI-driven world.

What This Workshop Is (and Is Not)

This workshop IS:

- Strategic
- Practical
- Grounded in the Scaling Up Framework
- Focused on leadership decisions, not tools

This workshop is NOT:

- A technical training
- A demo of AI software
- A race to adopt the latest trend

If you want clarity, alignment, and smart next steps, this is for you.

What You'll Gain by Attending

1. Clarity on Where AI Actually Matters in Your Business

You'll learn how to:

- Separate signal from noise in the AI conversation
- Understand where AI can create leverage—and where it's a distraction
- Frame AI decisions inside People, Strategy, Execution, and Cash

You'll stop reacting and start **making intentional choices**.

2. A Simple Way to Talk About AI with Your Leadership Team

After this workshop, you'll be able to:

- Lead productive internal conversations about AI
- Reduce fear, hype, and misalignment across your team
- Ask better questions instead of chasing answers

Your team doesn't need more tools.

They need **direction**.

3. A Practical Framework You Can Apply Immediately

This session gives you a clear structure for:

- Evaluating AI opportunities in your business
- Tailoring AI discussions to your company's size, industry, and maturity
- Making progress without overwhelming your organization

You'll leave knowing **what to explore**, **what to pause**, and **what to ignore**.

4. A High-Value Use of 60 Minutes

This virtual workshop is intentionally designed to respect your time.

You'll experience:

- A focused pace—no filler
- Clear transitions that connect AI to real business outcomes
- Moments to reflect on your own company, not someone else's

This is about **thinking**, not consuming information.

5. A Clear Decision Path Forward

By the end of the session, you'll be able to decide:

- Whether AI should be a priority for your business right now
- Where deeper work with your leadership team would create the most value
- What the smartest next step is—if any

You won't be pushed.

You'll be prepared.

Who This Workshop Is For

- Business owners and founders
- CEOs and executive teams
- Leadership teams at growth-stage companies
- Organizations using the Scaling Up Framework (or considering it)

Who Should Skip This

- Anyone looking for hands-on AI tool training
- Teams expecting implementation or software setup
- Leaders unwilling to slow down and think strategically

Why This Matters Now

AI is accelerating decision-making speed—but **clarity is lagging**.

The companies that win will not be the ones who adopt AI first.
They'll be the ones who adopt it **wisely**.

This workshop helps you do exactly that.

Join the Scaling Up with AI Virtual Workshop

Use AI to strengthen your strategy—not complicate it.
