Bugs that need to be fixed

- The conversation history does not show properly in the admin portal. It should match what is in the coaches portal. Admin portal still showing the partial conversation. Look at workshop **Scaling Up Exit convo testing**
- Coupon codes not restricted to their workshop. For example. Workshop 1 had a coupon code called half. It gave a 50% discount. Workshop 2 had no coupon codes. However when I paid for workshop 2 and used coupon code half it worked.
- On the registration page need the "I'd like to receive future Scaling Up events and insights" option checked by default.
- On the workshop setup process. The workshop type defaults to physical. Please make the default virtual.
- The survey results screen that is on the coaches portal workshop page should also be on the admin portal of the workshop screen.
- Survey results do not show name of the person who filled out the survey.
- Issues with workflow timing. See email labeled workflow testing results.

Improvements for version 2.5

- The registration list does not show up on the coaches workshop page like it does in the admin version.
- Would like to add a notes field on the admin workshop screen to save internal information about that workshop. Admin eyes only.
- Would like a preview option on surveys.
- The affiliate code option in template modification, shows up on landing page, registration page, and thank you page even though it only fires on the thank you page. We should remove from the others to avoid confusion.
- The affiliate code option cannot be edited on an individual workshop, only templates. Need to be able to edit on individual workshop.
- The affiliate code does not seem to be firing. We are going to be switching to a new one.
 - Therefore the affiliate code should not restrict to ldev.
- Want ability for coupon codes to be dollar amounts as well as percentages.
- The results aggregator functionality under surveys templates, do not show who answered, also do not show text based answers.
- The results aggregator (under surveys/templates-results) should probably be a separate toolset like financials so we can sort and group on workshop types, surveys, coach etc.
- On the execution status screen under workflows. It show a line for each person it emails. It should include the email of who it was sent to.
- Need to have the thanks for registering and thanks for attending emails not system driven so we can edit look and feel.

Questions

- If it workshop gets cancelled that has paid registration it will be a manual process to refund cash. If so we may need to add a feature in next release that sends a list of people that need to be refunded to admins so they don't get missed.
- Did we ever do any integration testing with our HubSpot? Have an idea if we can lookup a value of a field in the database based on their email address. (check coach status field)
