My use case for the workflows are:

- X amount of days or hours events surveys, emails, or files can be sent as part of standard workshop creation to attendees or coaches.

I want you to test.

Use the masterclass workshop for testing.

The master class has the following workflows assigned to it as pre-event. So

- Test
 - This sends a link to the General Pework survey 6hrs before.
- Standard Pre-Event Sequence
 - 1 day before event at 9:00 (I am not sure logic here) it sends email reminder event is starting in a day

Create a workshop, register for the workshop and see if:

- They receive email that they registered. This seems to be automatic and not part of any workflow
- The general prework survey gets sent to the attendee 6hrs before.
- The email that event starting in 1 day gets sent.

I might not be doing something right. I think I know what I did wrong but need you to test to validate it works.

Also when I assign a new workflow to a workshop it seems to fire right away regardless of what the timing says.
