

Your clients' assessment history now comes with them

Yesterday's update showed "bringing your history over" as the item being built. Today it is **live on the platform** — a coach can import a company's past Scaling Up Full assessment rounds out of Esperto and get real, scored reports plus the year-over-year comparison. This update covers exactly what shipped in the last two days, how it was proven safe, and what's next. Real screens throughout, captured today on the live platform.

What's new — and what it looks like

One headline feature this time, taken from idea to live in 48 hours — with an unusual amount of proof behind it.

Import

Aggregate Report

Import historical Esperto data

Admin-only. Backfill people (rosters) and past answers (results) from raw Esperto export files. This is staging-first: always **Preview** a parsed plan before you **Commit** it. Nothing here sends email — imported responses are recorded as already submitted.

What are you importing?

Roster brings people into a company roster. Results backfills past answers for people who already exist.

Roster (people)

Results (past answers)

1. Provide the export

Upload the raw Esperto JSON export (a Members file) and pick the owning coach + company.

Esperto export (JSON)

Choose File

No file chosen

Owning coach

Select a coach...

Company name

Acme Corp

Pre-filled from the filename; edit to match the existing company exactly.

2. Preview, then commit

Preview is read-only. Commit only unlocks after a clean preview with no blocking issues.

Preview

Commit

Scaling Up Workshop Platform v2.0

Yesterday, this screen was a roadmap item. The import tool could bring in people (rosters) and one assessment type's past answers — and the July 1 update listed historical Scaling Up Full import as the thing being built next.

Scaling Up Coach

Settings Sign Out

< Back to Members & Teams

Bring in your Esperto history

Bring your past Esperto rosters and assessment results into the platform. Every import is staged: you preview a read-only plan first and only commit when it's clean. Nothing is emailed to anyone, and the roster lands in your companies' Members & Teams.

Supported today: Members rosters, QSP-v2 results, and Scaling Up Full (historical results). Other Esperto assessment types aren't available for import yet.

What are you importing?

Roster brings people into a company roster. Results backfills past answers for people who already exist.

Roster (people) Results (past answers) **SU-Full (historical)**

1. Provide the export

Upload the restricted-individual export files for one round, name the round, and choose the organization they belong to.

Round label

e.g. "2025 Annual", "Year 1"

Names this import round (e.g. "2025 Annual", "Year 1") — used to tell repeated rounds apart.

Target organization

Today, it's live. LIVE The same screen on the production platform this morning: a third option — **SU-Full (historical)** — with a plain-language flow: name the round (e.g. "2025 Annual", "Year 1"), pick which company it belongs to, and upload the export files for that round. The header copy updates itself too: "Supported today: Members rosters, QSP-v2 results, and Scaling Up Full (historical results)."

How a coach uses it, start to finish:

- **1. Import the company's roster first** (same as before) — that's how historical answers get matched to real people.
- **2. Pick "SU-Full (historical)", name the round, choose the company**, and upload the round's export files from Esperto.
- **3. Preview.** Nothing is written yet — the platform shows exactly what it will import, who resolved, and anything it will skip, before you commit.

- **4. Commit.** The round lands as a closed, back-dated campaign: real per-person reports, scored by our engine — and it never emails anyone.

G Gabriel
Coach

Why history matters: every imported round feeds this — the year-over-year comparison that launched June 30. Import "Year 1" and "Year 2" from Esperto, and a client's progress story is on one screen the day they join the platform.

What protects a client's history (all live, all exercised on production):

- **Re-uploading the same round twice does nothing** — the platform recognizes identical data and refuses to create duplicates.
- **Uploading *changed* data under the same round name is refused** with a clear error — history is never silently rewritten.
- **Wrong files are refused cleanly** at the door (we verified this by accident, with a wrongly-shaped file of our own — it was turned away exactly as designed).
- **Every import is tied to one named company you choose explicitly** — the platform never guesses which company a file belongs to.

Proven against Esperto itself — not assumed

This is the part that took the time, and it's the reason the feature can be trusted with real client history.

Esperto's export files carry answers under code names like **Q7_3 — with no question text at all**. And it turned out the codes are **not in the order the survey shows them**. Guess the mapping wrong, and every imported report silently attaches answers to the wrong questions — the numbers still look plausible, so nobody would ever notice. Two sections were genuinely indistinguishable by any file we had:

Scalability & Technology

6 questions

⇔

Internal Communication

6 questions

A positional guess would have swapped these two sections in every imported report — invisibly.

Four more 5-question sections had the same ambiguity among themselves.

So we didn't guess — we asked Esperto. We ran controlled test submissions *into the real Esperto tool*: filled section 1 entirely with 1s, section 2 with 2s, and so on — then read the export back. Whichever code family came back as all-5s *is* section 5. A second run with a different value on every single row confirmed the order of questions *inside* each section too. Every mapping in the shipped feature traces to that experiment, not to an assumption. (All Esperto-side test data was deleted afterwards; the account was left exactly as found.)

Then we proved the whole pipeline end-to-end with a known-answer test on production. Because we planted the values ourselves, the correct report was known in advance — and the live platform reproduced it exactly:

Section	Values we planted	Report must show	Report showed
Your Employees	1,2,3,4,5,6,7,8	avg 4.5 · 36 pts	4.5 · 36 ✓
Company Culture	1,2,3,4,5	avg 3.0 · 15 pts	3.0 · 15 ✓
Strategy	1...7	avg 4.0 · 28 pts	4.0 · 28 ✓
Leadership Team	1...4	avg 2.5 · 10 pts	2.5 · 10 ✓
Operational Processes	1...5	avg 3.0 · 15 pts	3.0 · 15 ✓
Sales & Marketing	1...5	avg 3.0 · 15 pts	3.0 · 15 ✓
Scalability & Technology	1...6	avg 3.5 · 21 pts	3.5 · 21 ✓

Cash	1...5	avg 3.0 · 15 pts	3.0 · 15 ✓
Your Leadership	1...10	avg 5.5 · 55 pts	5.5 · 55 ✓
Internal Communication	1...6	avg 3.5 · 21 pts	3.5 · 21 ✓

All 63 imported answers (61 sliders + the two team-size fields) matched position-for-position; the report totals (231 points, 3.79 average) matched the arithmetic exactly. The test round was then removed from production using the same removal tool we'd reach for in a real incident — which means the emergency path has now been rehearsed for real, too.

The launch was run like a fire drill — and the drill caught three real things

Staged rollout, each step gated on evidence. The catches below were found by the process itself and fixed the same day, before any coach could hit them.

0 · Verify

Controlled Esperto submission proves every mapping

PASSED

1 · Pilot

Known-answer import into a test company on production data

PASSED

2 · Canary

Feature armed for the one test company only; duplicate + tamper defenses exercised live

PASSED

3 · Go live

Switched on for everyone; live checks on coach + admin screens

LIVE

4 · Clean up

Test round surgically removed — rollback tooling rehearsed on production

PASSED

CAUGHT BY THE PRE-LAUNCH CHECK — BEFORE ANY IMPORT COULD FAIL

1 · The live questionnaire had quietly gained a required question

The current live version of the Scaling Up Full questionnaire includes a required team-size question that the import mapping (written against the earlier version) didn't carry. Left alone, **every single import would have been skipped as "incomplete"** — the feature would have shipped broken. The pre-launch check caught it; the mapping was extended (the team-size fields were already verified in the Esperto experiment) and, as a bonus, imported reports now carry growth-phase data.

CAUGHT BY THE PILOT — FIXED FOR ALL FUTURE LARGE IMPORTS

2 • The database time budget was too tight for big batches

The import's save step ran under a 5-second internal time limit — fine for small tests, but uncomfortably tight for a full leadership-team round (and it's rated for up to 300 files). The pilot tripped it; the budget is now 55 seconds. Every failed attempt rolled back cleanly to nothing — the all-or-nothing design held under real failure.

CAUGHT BY THE GO-LIVE CHECK — FIXED WITHIN THE HOUR

3 • The page still said the feature didn't exist

With the feature switched on, the import page offered SU-Full — while its own header still read "Supported today: Members rosters and QSP-v2 results." The sentence now updates itself with the feature switch (and reads correctly in both states).

- Honest footnote: monitoring for this feature is currently a human reading structured production logs (every import attempt, refusal, and conflict is logged in detail) plus an instant kill switch — automated alerting is on the hardening list below, sized for when import traffic actually grows.

The roadmap — what's next, aimed at real screens

Two inputs merged here: the standing plan, and **the 19-item feedback list prepared July 1** — every one of those items is now placed below, each investigated against the actual platform before being written down.

A CORRECTION TO YESTERDAY'S PICTURE — FOUND WHILE CHECKING THIS ROADMAP AGAINST THE LIVE PLATFORM

The Scaling Up Full group report upgrades are not "awaiting sign-off" — they've been live since June 30

Publish-gating and the Peers benchmark column were switched on June 30 ("turn it on") and verified against a real campaign the same day. They're removed from the waiting list below — nothing for you to unblock there.

Live, not pending: the SU-Full group report with its Peers column, as it renders today.

1 Rockefeller + LVA history import

NEEDS ONE THING FROM YOU

The import machinery built for Scaling Up Full — the staging, the duplicate/tamper defenses, the company matching — is generic. Each remaining assessment type only needs its own *verified question mapping*, and the Esperto-experiment method above makes that a short, repeatable job.

- **Blocked on:** real Rockefeller and LVA export files (and Esperto access to run the same verification experiment against those questionnaires).
- Until then, the platform deliberately **refuses** Rockefeller/LVA history uploads rather than guessing — the same no-silent-corruption rule that governed SU-Full.

2 Quick fixes from the July 1 list

SMALL · BUILDABLE NOW

Each of these was checked against the actual code before landing here — two turned out to be different (and easier) than they first appeared.

- **The "duplicate" QSP question isn't a stray copy** — investigation: the survey deliberately carries *three* identically-labeled "share the stories" slots, ported faithfully from Esperto. The fix is differentiating the labels ("Story 1 / 2 / 3"), not deleting a question — no answers are lost.

- **Coach completion email says "a responder" instead of the person's name** — investigation: the email does insert a name when the respondent record has one; the generic wording is a missing-name fallback. Fix: fall back to the person's roster name, then their email — never a generic word.
- **"Leadership Team" label capitalization** — one-line wording fix in the LVA survey.
- **Core-values question rewording** — the suggested copy is already in hand ("What are your core values? If not yet set, what do you think the top 3 should be?").
- **Possible duplicate: "most important thing to achieve this year's goals"** — we'll verify against the adjacent question and the Esperto source before touching it (same no-guessing rule as the import work).

3 Controls for admins & coaches

FROM THE JULY 1 LIST

- **"Send results to end users" as a template-level default, with per-coach override** — the campaign-level toggle already exists (shipped with auto-send); this adds the default above it and the override below it.
- **Disable a retired template** (e.g. QSP V1) so it stops appearing when setting up new campaigns.
- **Delete an admin** who has left the company — currently there's no way to remove one from the admin portal.

The screen this targets — the template list. "Disable template" lands as a control on these rows; the results-email default lands in each template's settings.

4

The survey experience — sliders and the invitation email

FROM THE JULY 1 LIST

Both are participant-facing, so here's exactly what will change, drawn to spec:

Hi [Name],

2 [Coach name] has invited you to complete the Quarterly Session Prep for [Company].

3 Revised body copy — final wording to come.

4 Begin

- 1 A dedicated space for the coach's logo.
- 2 The coach's name in the body copy.
- 3 Revised wording — **the new copy is one of the items we need from you** (see the list at the end).
- 4 A larger, more prominent "Begin" button.

5 Reports & printing

FROM THE JULY 1 LIST

- **Free-form text answers get the full page width** in printable reports — question on its own row, answer on the row below, across every template (today they're squeezed into a narrow column).
- **A print option for the LVA group report** — the report exists and renders; there's simply no print/export control on it yet.

SCALING UP July 1, 2026

Generated by Scaling Up Platform

The screen this targets — the LVA group report: gains a print control now, and the peer-comparison columns later (item 7 below).

6

Bigger builds: question editor & findings logic

NEEDS SCOPING

- **A question editor** — add and edit survey questions directly on the platform. The template editor exists (below); question-level editing inside it is the build.
- **Findings logic** — drive report content and recommendations from a respondent's answers (beyond the survey-screen branching already tracked). This is output-side logic: "if Cash scores below X, show recommendation Y."

The screen this grows from — today's template editor. Question editing lands here; the greyed-out "Conditional Logic" tab is where survey-side branching (a separate, already-tracked item) will live, while findings logic shapes the *reports*.

7

LVA: peer averages, peer comparison, and the fidelity plan

ONE WORKSTREAM

Three related asks that belong together: set peer averages for LVA questions (and for new templates going forward), show the peer comparison in both LVA reports, and the already-locked LVA fidelity plan. The SU-Full Peers benchmark that went live June 30 is the working model — the same mechanism extends to LVA rather than being rebuilt.

Hardening behind the scenes

QUEUED

- **Automated alerting** on import activity (today: detailed logs + a human + a kill switch).
- An **"Imported from Esperto (historical)" badge** on rendered reports — today the campaign's name carries the "imported" marker.
- The same generous time budget for report *reading* that imports now have for writing.

What we're waiting on from you

- **Rockefeller + LVA export files** — the one input that unblocks importing those two assessment types' history (roadmap item 1).
- **New copy for the QSP V2 invitation email** — the layout changes are drawn above; the revised wording is marked "TBD" on the July 1 list.
- **Three clarifications from the LVA wording pass** **NEEDS CLARIFICATION** — what "The leadership" question is meant to ask; what "Growth financing" is meant to ask (ability to *get* financing?); and what the concern is with "What do the media write about the company?". Once clarified, they join the quick-fix batch (roadmap item 2).

Prepared July 2, 2026 · Scaling Up Platform v2 · All screenshots captured from the live platform or its admin tools. The historical import shipped across pull requests #113–#120 with a verified question-by-question mapping, staged rollout, and a rehearsed rollback path.
