

Six releases in three days — every feature phase of the roadmap is now live

The July 3 update ended with "sliders and printing next up." Since then, **six releases shipped to the live platform**: the survey sliders and report printing, LVA peer benchmarks, the unlocked question editor, findings logic, a platform-hardening pass, and (as of this morning) conditional questions. That closes **your items #4, #8, #9, #10, #11, #12 and #13** — and with them, every buildable phase of the roadmap. Everything below is shown, not described: real screens from the production platform and from each release's launch verification against the production database.

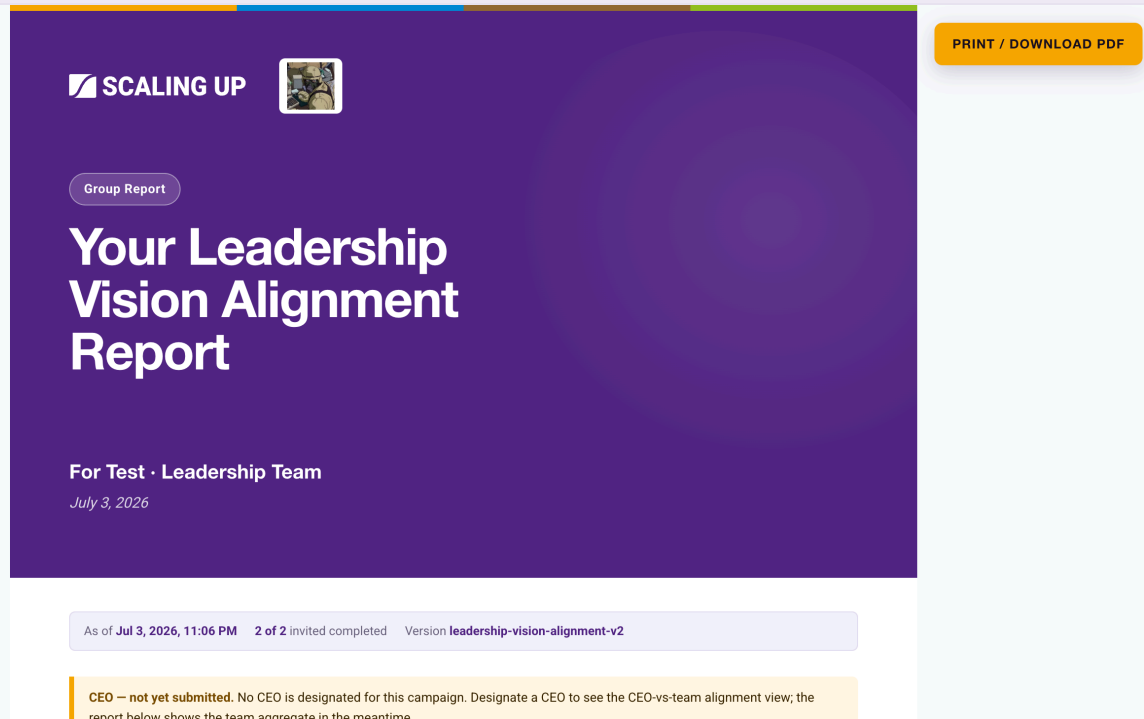

1 · The survey sliders & report printing LIVE JULY 3

Your #8 (sliders), #4 (full-width answers) and #9 (group-report printing) — shipped the evening the last update went out.

The screenshot displays a survey interface with two sliders. The first slider is labeled 'Cash' with a red asterisk. It has a track with three points labeled 1, 2, and 3. The slider is positioned at 1, and the text 'Weak' is on the left and 'Strong' is on the right. Below the slider, it says 'Your rating: 1'. The second slider is labeled 'Growth Financing' with a red asterisk. It also has a track with three points labeled 1, 2, and 3. The slider is positioned at 1, and the text 'Weak' is on the left and 'Strong' is on the right. Below the slider, it says 'Your rating: 1'. At the bottom of the screen, there are 'Back' and 'Next' buttons. A small 'N' icon is in the bottom left corner, and 'Powered by Scaling Up' is in the bottom center.

#8 — the slider respondents actually use. LIVE The track is visibly thicker and easier to grab, and **tapping any number under the track jumps the slider straight**

to it — exactly the click-to-set behavior drawn in the July 2 mock. This is the live survey, on all three participant surfaces (invited, public, quick-assessment).

#9 — Print / Download PDF, on every group report. **LIVE** The button at the top of this production LVA group report produces a clean 6-page PDF (print layout QA'd page by page). While shipping this we also closed #4: free-form text answers now lay out **full-width with the question above the answer** — including a squeeze nobody had reported yet, where long text answers were being crushed into a 96-pixel rating column on LVA reports. Found during pre-release QA, fixed in the same release.

2 • Peer benchmarks for the LVA **LIVE JULY 4**

Your #12 (the ability to set peer averages) and #13 (peer comparison in both LVA reports).

Organizational Strengths and Weaknesses

The team rated the company with 16 factors that affect the success of an organization.
Each factor was rated with 'strong', 'average' or 'weak'.

#13 — peers inline in the group report. LIVE Each rating row gains a **Peers** value with a signed deviation — green ▲ where the team beats its peers, red ▼ where it trails. Factors without a peer value simply omit the comparison, so a partially-filled benchmark set never breaks a report.

Organizational Strengths and Weaknesses — compared to peers

Your rating per factor next to the peer average (companies that have preceded you in this assessment).

FACTOR	YOUR RATING	PEERS	DIFFERENCE
Recruitment of new staff	Strong (10.0)	6.3	▲ +3.7
The Leadership	Strong (10.0)	2.5	▲ +7.5
Culture	Strong (10.0)	5.0	▲ +5.0
Cash	Weak (0.0)	9.9	▼ -9.9

#13 — and in the individual report. LIVE A "compared to peers" section in the individual LVA report, in the natural spot after the ratings. **One honest note:** these two verification shots used temporary numbers entered against the production database and *cleared before launch* — we never invent benchmark data. Which means the live reports are peer-free today, waiting on one thing: **#12 gives you a "Peer averages" panel on the LVA template editor. Enter your real peer numbers there and both reports light up instantly** — no release needed.

3 • The question editor, unlocked LIVE JULY 5

Your #10 — add and edit questions of every type, directly on the platform. The engine already supported all four question types; the editor only exposed sliders. That gap is closed.

Before — July 1

Show only when...Configure

The type dropdown is enabled — SLIDER, TEXT, NUMBER and MULTI_CHOICE — and choosing multiple-choice opens an options editor with add/remove and a "max choices" cap that the live survey enforces. The after-shot is the editor *on production this morning*, on a real draft. Question identifiers are generated automatically and human-readable (S1_pick_your_top_two_obstacles), and once a question is published its identity is locked — so trend history and the Esperto import mapping can never silently break, no matter what gets edited later.

Keep Scaling, TestDelete.

You've completed your assessment. Turn these results into a 90-day plan with your coach.

The end-to-end proof. A test instrument authored entirely in the editor — text, number and multiple-choice questions — taken as a survey and rendered on a report, with the chosen options shown as their labels. The launch check also caught and same-day-fixed two real defects: a pre-existing bug where a follow-up save could silently delete just-saved questions, and multiple-choice answers displaying as raw internal keys on reports. Both are the reason every release gets walked end-to-end before it counts as done.

4 • Findings logic — answer-driven recommendations LIVE JULY 6

Your #11 — report text that reacts to what the respondent answered, authorable per question, on every question type.

The screenshot displays the Scaling Up platform's assessment editor. The top navigation bar includes links for Dashboard, Workshops, Approvals, Assessments (active), Automation, People, and Financials. The left sidebar lists various assessment components: ASSESSMENTS, Dashboard, Organizations (coming soon), Access Groups, Templates (highlighted), Campaigns (coming soon), Public Quizzes (coming soon), Import, and Aggregate Report. The main workspace is titled 'Leadership Vision Alignment' and shows version 'v3 (published)' with an 'INVITED' status. Below this, a list of sections is visible: S0_WELCOME, S1_FINANCIALS (selected), S2_VISION, S3_STRENGTHS, S4_OBSTACLES, S5_EXPLAINED, S6_FOCUS, and S7_COMPLETION. The 'Questions' tab for S1_FINANCIALS is active, showing four questions: S1_REVENUE, S1_GROSS_MARGIN, S1_NET_PROFIT_PCT, and S1_CUSTOMERS, all of type 'NUMBER'. The 'Edit Question' panel for S1_REVENUE is open on the right, showing the question text 'What is the company's revenue in three years?' and the 'Question Type' set to 'NUMBER'.

Where you author it — the Findings panel, live on the production editor. LIVE

Every scoreable question gains a collapsible Findings panel: score bands with a message on sliders and number questions (with a coverage hint so gaps in the bands

can't surprise you at publish), and per-option text on multiple-choice. Editable on existing questions too — that's the point: add findings to the live LVA and QSP instruments without rebuilding them.

WHAT TO WORK ON NEXT

Your recommendations

Walk Section One

Walk slider HIGH finding.

Walk NUMBER finding for tiny teams.

Walk MC finding: review your cash conversion cycle.

WHAT TO WORK ON NEXT

Your recommendations

Walk Qual Section

Qual walk slider LOW finding.

Qual walk NUMBER finding.

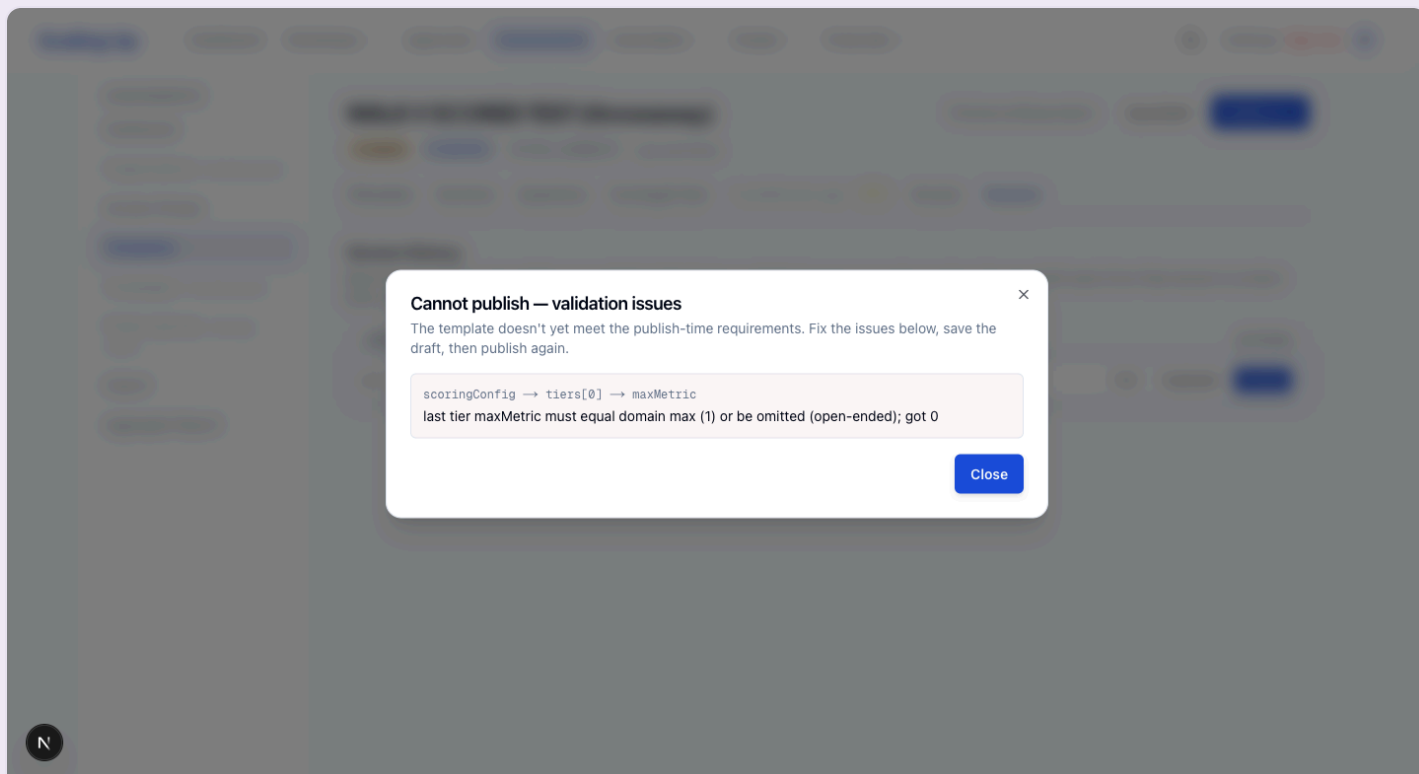

Qual walk MC finding for Cash.

Where it lands — both report families. Scored reports merge the fired findings into "What to work on next" (top); qualitative reports like the LVA and QSP gain a consolidated findings section (bottom) — **the first time those instruments can carry answer-driven recommendations at all.** Two guarantees worth knowing: findings are **frozen into each submission at scoring time**, so a report someone already received can never quietly change; and the SU-Full's 305 existing recommendation bands were

regression-proven byte-identical. Ships empty by design — **open any draft, write findings per question, publish, and new campaigns render them.**

5 • The hardening pass — protecting what's live LIVE JULY 6

With every feature phase shipped, this release deliberately added no new features — it hardened the platform four ways while the import phase waits on your export files.

Broken scoring can no longer publish. LIVE The July 5 launch check surfaced a lurking gap: a template whose scoring tiers didn't fully cover the score range would publish fine — and then reject *every single submission*. Now publish itself blocks it, with a plain-English message naming the fix. A scan of all 19 published versions on production confirmed **zero real templates were affected**; the only offender was the disposable test template that uncovered the gap.

Imported history is now visibly labeled. LIVE Anything brought over from Esperto carries an **"Imported from Esperto (historical)"** badge everywhere it renders — respondent reports, group reports, and the campaign screen — so nobody ever mistakes migrated history for fresh platform data. This lands ahead of the Rockefeller/LVA history imports, so provenance is honest from day one. Two quieter items shipped alongside: **import failures now email the admin inbox within ~10 minutes** (previously, spotting one meant a human reading server logs), and report pages now tolerate slow database connections instead of intermittently erroring.

6 • Conditional questions — the greyed-out tab, made real LIVE TODAY

Since May the template editor has carried a disabled "Conditional Logic — v1.5" tab. As of this morning that promise is a shipped feature: any question can be shown only when a respondent picks a specific option on an earlier multiple-choice question.

Help text

Optional helper text shown to resp

Where you author it — "Show only when...", live on the production editor. **LIVE**

Two dropdowns on any question: pick an earlier multiple-choice question, pick one of its options — done. The editor protects you from every wrong turn: required questions can't be made conditional (a hidden required question would trap the respondent), deleting a question that others depend on warns you by name, and a broken rule can't reach respondents because **publishing is blocked with a plain-English message** until it's fixed.

Gate Section

What is your biggest obstacle? *

- ☒ People
- ☒ Cash

Why are PEOPLE your obstacle?

Walk slider — always visibleWalk slider — always visible

Type your answer here...

Why is CASH your obstacle?

Type your answer here...

What respondents see. The launch-verification survey: a "biggest obstacle?" question where ticking **People** and **Cash** made their two "why?" follow-ups appear in place — untick one and its follow-up (and any half-typed answer) vanishes. It works across pages too: a follow-up section whose questions are all hidden **disappears from the page count entirely** ("Section 1 of 1" became "Section 1 of 2" the moment an option was ticked) — no more walking respondents through pages that don't apply to them.

Your WALK W COND TEST (throwaway) Report

WALK W COND TEST (throwaway) for: TestDelete MeSmoke · Browser smoke test
— safe to delete

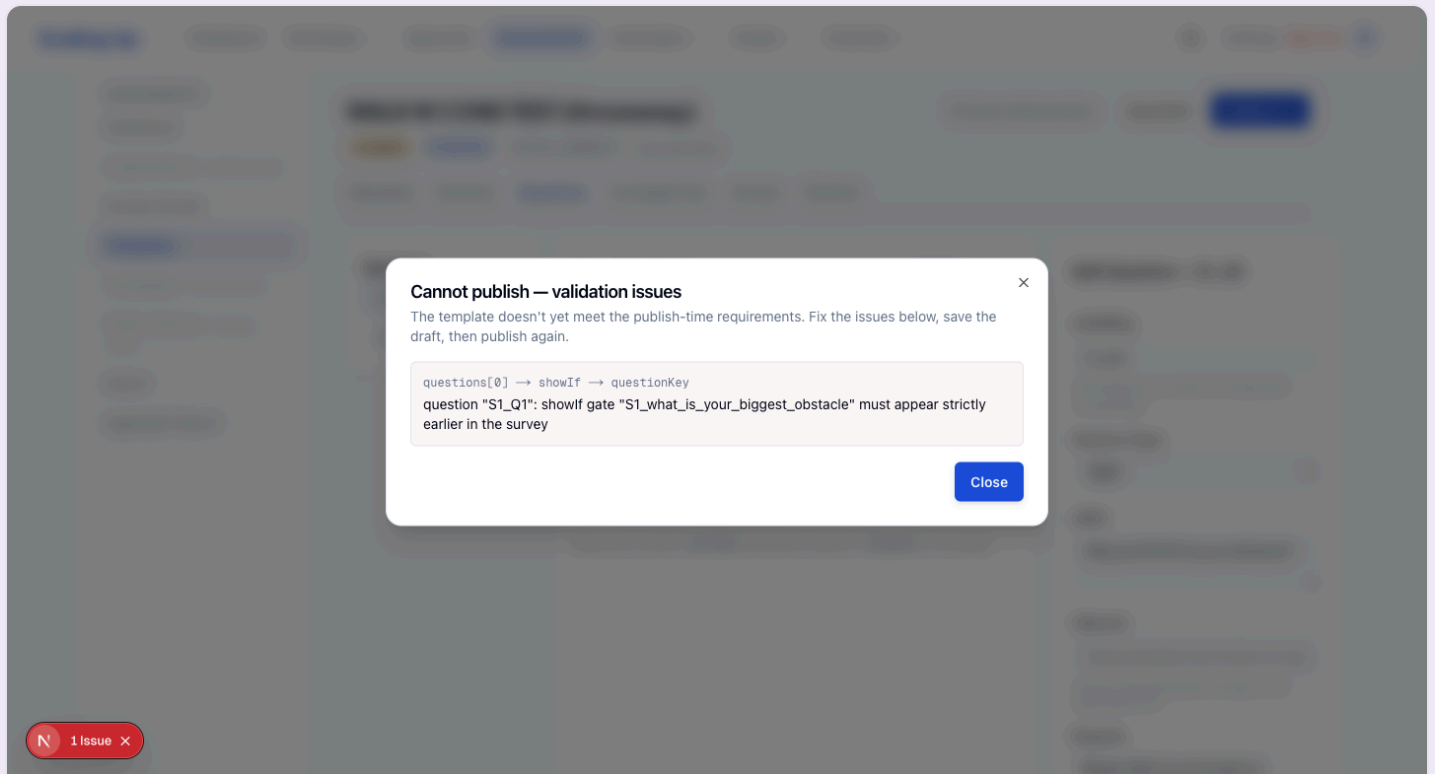

Test · July 6, 2026

PREFACE

Dear TestDelete,

This is your report from the WALK W COND TEST (throwaway). It lists your own answers, organized by theme — great for preparing your strategy sessions and priority-making.

What the report shows — only the picked path. The same submission's report: the People follow-ups are there, the Cash question is nowhere — the report reads like the respondent's actual conversation. This is the pattern the LVA has always had ("only explain the obstacles you picked"), **now available on every instrument you author** — including the two new assessments you've been building in the editor. It's tamper-proof too: a hand-crafted submission trying to smuggle in answers to hidden questions gets those answers stripped by the server before anything is stored.

The guardrail, caught in the act. During launch verification we deliberately dragged a conditional question *above* the question that controls it — and publish refused, naming the exact question and the fix. Broken conditional logic cannot reach a respondent. (Like findings, this ships empty: no live instrument changed today. **Add a "Show only when..." rule to any draft, publish, and new campaigns honor it.**)

The roadmap — every feature phase stamped

Same phases as the July 2 triage of your list. Six releases later, everything buildable is live; one phase still needs a file from you.

Quick fixes + admin & coach controls

DONE • JULY 2–3

Covered in the last two updates — wording fixes, invitation email, results-email default, disable-a-template, remove-an-admin.

The survey experience & reports/printing

DONE • LIVE JULY 3

#8 slider (thicker track + tap-to-set), #4 full-width text answers, #9 group-report
Print/PDF — section 1 above.

LVA peer benchmarks

DONE · LIVE JULY 4

#12 the peer-averages panel + #13 comparison in both LVA reports — section 2 above. **Waiting only on your real peer numbers.**

Bigger builds — question editor & findings logic

DONE · LIVE JULY 5–6

#10 all-type question authoring and #11 answer-driven findings — sections 3 and 4 above. Together with conditional questions (section 6), you can now author a complete new instrument — questions, logic, and recommendations — without a developer.

Hardening pass

DONE · LIVE JULY 6

Publish-time scoring guard, import failure alerts to the admin inbox, the "Imported from Esperto" badge, resilient report pages — section 5 above. Further hardening (an alerting dashboard, log retention) continues in the background without blocking anything.

Conditional questions

DONE · LIVE JULY 6

The editor's "Conditional Logic" tab promise, delivered as show-if authoring — section 6 above.

Rockefeller + LVA history import

NEEDS ONE THING FROM YOU

The import machinery has been live since July 2 (the SU-Full history import runs on it today, now with failure alerting and the provenance badge from section 5). Each remaining assessment type needs its question mapping verified against a real export

— **still blocked on the Rockefeller and LVA export files.** The platform deliberately refuses those uploads rather than guessing.

Waiting on you — the same four, one now more valuable

Real LVA peer numbers

The "Peer averages" panel is live on the LVA template editor. Enter the real numbers and every LVA report — group and individual — gains the peer comparison instantly.

Rockefeller + LVA export files

The only thing between the last roadmap phase and "done".

Revised QSP invitation wording (#2.3)

Send the copy and it drops in as-is.

Three wording clarifications

#15 "The leadership", #16 "Growth financing", #19 the media question — what should each ask?

Prepared July 6, 2026 · Screenshots are real screens: captured either directly on the production platform (platformtest.scalingup.com) — including the editor shots taken this morning — or during each release's launch verification run against the production database (the survey, report and publish-guard shots, labeled in their captions). The peer-benchmark shots used temporary verification values that were cleared before launch; no invented data was ever shown to users.
