

Historical import goes live — the last piece of retiring Esperto

Today shipped **Wave X**: coaches and admins can now import a company's historical **Leadership Vision Alignment** and **Rockefeller Habits Checklist** rounds straight from Esperto exports — the same way Scaling Up Full already imports. That was the last assessment type blocked on this, so **every feature phase of the assessment roadmap is now live in production**.

The whole thing landed in one day, start to finish: design → build → an independent code review → verifying every mapping against the real Esperto tool → a full dry-run against production → and the go-live flip. Below is what that looks like, with the actual screens.

3

assessment types now importable from Esperto history

100%

of answer mappings verified exact against the live tool

P1

the last Jeff-blocked roadmap phase — now closed

1 • What coaches see Live on production

The import screen now offers all three historical assessments. A coach picks the assessment, names the round (e.g. "2025 Annual"), chooses the company, and uploads the files. Everything is staged — you **preview** a parsed plan first and only **commit** when it's clean. Nothing emails anyone; imported answers are recorded as already submitted.

ASSESSMENTS

[Dashboard](#)[Organizations](#) *(coming soon)*[Access Groups](#)[Templates](#)[Campaigns](#) *(coming soon)*[Public Quizzes](#) *(coming soon)*[Import](#)[Aggregate Report](#)

Import from Esperto

Admin-only. Backfill people (rosters) and past answers (results) from raw Esperto export files. This is staging-first: always **Preview** a parsed plan before you **Commit** it. Nothing here sends email — imported responses are recorded as already submitted.

Supported today: **Members rosters**, **QSP-v2 results**, **Scaling Up Full (historical rounds)**, **Leadership Vision Alignment** and **Rockefeller Habits Checklist** (historical rounds). Other Esperto assessment types aren't available for import yet. Historical rounds need the company's Members roster imported first.

What are you importing?

Roster brings people into a company roster. Results backfills past answers for people who already exist.

[Roster \(people\)](#)[Results \(past answers\)](#)[Historical rounds](#)

1. Provide the export

Upload the restricted-individual export files for one round, name the round, and choose the organization they belong to.

Assessment

**Scaling Up Full**

Scored — renders full scored reports and feeds longitudinal.

**Leadership Vision Alignment**

Qualitative — renders the LVA report (no scores).

**Rockefeller Habits Checklist**

Scored — renders per-respondent scored reports.

One instrument per batch — the files must all be restricted individual exports of this assessment. Import the company's Members roster first; results only attach to people already on the roster.

Round label

Names this import round (e.g. "2025 Annual", "Year 1") — used to tell repeated rounds apart.

Target organization

The company these historical results belong to. Chosen explicitly — never guessed from the file contents.

Individual files

[Choose Files](#)

No file chosen

Aggregate export (optional, not required)

[Choose Files](#)

No file chosen

If you also have the cohort/aggregate export, you can attach it — it's inspected but never imported; the group view is always recomputed from individuals.

2. Preview, then commit

Preview is read-only. Commit only unlocks after a clean preview with no blocking issues.

[Preview](#)[Commit](#)

Import from Esperto — "Historical rounds"

The new instrument picker: **Scaling Up Full**, **Leadership Vision Alignment**, and **Rockefeller Habits Checklist**, each labelled scored vs. qualitative. Round label + explicit company selection + roster-first guidance are all on one screen.

2 • The instruments this replaces

Esperto's own campaign builder offers these assessment variants. Until today only Scaling Up Full history could be brought over; LVA and Rockefeller history was stranded in Esperto. Now all three come home.

ESPERTO (SCALINGUPTOOLKIT.COM) • THE TOOL BEING RETIRED

The source assessments

ScaleUp2, LeadVision and RockHabits — the three we now import historical results from — plus the QSP variants already handled.

Communication rhythm is established and information moves through organization accurately and quickly.

All employees are in a daily huddle that lasts less than 15 minutes.

All teams have a weekly meeting.

The executive and middle managers meet for a day of learning, resolving big issues, and DNA transfer each month.

Quarterly and annually, the executive and middle managers meet offsite to work on the 4 Decisions.

Previous

Next

ESPERTO • ROCKEFELLER HABITS CHECKLIST

A real source instrument

The Rockefeller survey as respondents filled it — 40 sliders across 10 sections. Reading those historical answers back correctly is exactly what this wave had to get right.

3 • How we know every answer lands in the right place

The risk in this kind of import is subtle: an old answer silently mapped to the *wrong* question corrupts a company's history without any error. So rather than eyeball it, I took each assessment on Esperto myself with a deliberately patterned set of

answers, exported it, and checked that every single field came back exactly where the mapping predicts.

Rockefeller — a self-checking answer pattern

Each of the 40 sliders was set to a designed value (section + row, cycling 0–3). The export came back matching the pattern on all 40, and re-scoring reproduced Esperto's own totals exactly:

CHECK	RESULT
All 40 slider values match the designed pattern	✓ exact
Recomputed overall total vs. Esperto's own figure	✓ 60 = 60
Recomputed "sections achieved" count	✓ 20 = 20

Leadership Vision Alignment — three families, all confirmed

LVA is trickier: financial figures, a 16-factor strengths grid, a "pick your 3 biggest obstacles" question, and free-text. Each was answered so its landing spot is unambiguous.

FAMILY	WHAT WAS VERIFIED	
Financials	9 figures entered 11, 22 ... 99 — each landed on the right field (the survey even exposed the internal codes)	✓
Obstacles pick-3	picking factors 1 / 10 / 16 decoded to Recruitment / Sales / Growth Financing, matching the three "why" boxes that appeared	✓
Focus-area tail	the previously-uncertain last questions (leadership discussions, next hire, department KPIs) all confirmed to their correct fields	✓
Coverage	every mapped field present; zero unrecognised answers	✓

The mapping itself, made concrete — Esperto's field on the left, our question on the right:

Q1_1 (revenue)	→	S1_revenue
Q16_1...16 (grid)	→	S3 · 16 factors
Q16a "1,10,16"	→	recruitment, sales, growth_financing
Q34	→	department KPIs

These verified mappings are now frozen behind an automated test: no future change can quietly re-point a historical answer without the test failing.

4 · A full dress rehearsal before flipping it on

Before enabling the feature, I ran the entire import through the real production system into a disposable company — then deleted it — to confirm the whole path behaves, including the ways it should *refuse* bad input.

REHEARSAL STEP	OUTCOME
Rockefeller round imported & scored on production	✓ 60 / 20, exact
LVA round imported & scored	✓ scored
Both labelled "imported from Esperto (historical)"	✓ badged
Wrong assessment's file rejected up-front	✓ blocked
A person not on the roster → skipped, not crashed	✓ skipped
Disposable company cleaned up afterward	✓ removed

5 · Safety & what's left

Reversible in one move. The feature sits behind a switch — turning it off instantly hides it again, with Scaling Up Full import untouched. A bad import can be quarantined by a single tested command.

Ships empty, by design. No historical data is imported until a coach chooses to bring a company's rounds over — consistent with how everything in this module treats real data honestly.

Still waiting on you / Jeff (external): the real LVA peer-average numbers (the file shared was misnamed — it held sample exports, not peer data), plus three small copy/wording clarifications. None block anything shipped.

Wave X · LVA + Rockefeller historical import · shipped & live 2026-07-07. Built through the full gated pipeline (design → dual review → adversarial pass → controlled verification → production dress-rehearsal → launch), with the source-of-truth and task board updated.
