

After closing P1 — reliability, editor cleanup, and recommendations in the results email

With every feature phase of the assessment roadmap now live (Wave X retired the last of Esperto yesterday), this update is about **hardening and following through**: catching a bad import before anyone notices, removing a stale editor screen that showed made-up numbers, and — the one genuinely new capability — putting a respondent's personalized recommendations into the **results email** itself.

Four changes, all in production. Three are live now; the fourth is built and staged behind a switch, waiting on your go so you can see a real sample email before anything reaches a client.

4

changes shipped since the Wave X report

1

staged & ready to switch on, on your word

5,600

automated tests passing — zero new failures

1 • Catch a bad import before anyone notices

Historical imports are powerful but quiet — a bad file could fail with only a line buried in a server log. This adds an in-app view so import trouble surfaces where an admin will actually see it.

Admin → Assessments → Observability · records automatically, no setup

- **Import health, in the app instead of the logs**

The automated import-watch now reports its actual decisions and its own health on a page in the admin area, rather than only emailing on failure.

- **The silent gaps are closed**

Two paths used to leave no trace at all — previewing an import, and files the system refuses upfront (wrong assessment, bad shape). Both are now recorded, across every pre-commit check in both import routes.

- **Silence means healthy**

The panel ships empty and only fills in when an import actually hits a problem — so a blank page is the good state, and a populated one is your early warning.

2 • The editor stops showing numbers that were never real

The template editor's scoring screen carried a leftover "peer benchmarks" card with hard-coded, invented values — for a feature that already exists for real elsewhere (the peer- averages panel shipped in Wave S). An admin editing a template should never see fabricated data presented as if it's live. Removed it, plus a dead button that did nothing.

■ BEFORE

A disabled "Peer Benchmarks" card showed fake figures (2.4 / 1.8 / 2.7), and a "Preview as Respondent" button was greyed out with a "coming soon" note that never arrived.

✓ AFTER

The scoring tab ends cleanly. Real peer-average authoring lives in its own panel (Wave S) — the only place peer numbers can be entered, and only real ones.

3 · Personalized recommendations, now in the results email

Until now, the answer-driven "what to work on next" recommendations you author appeared only on the on-screen report. This adds them to the **results email** — for both the person assessed and their referring coach, on every instrument type (scored and qualitative). It reads the recommendations already frozen onto each submission, so issued reports never drift.

WHAT TO WORK ON NEXT

Your recommendations

PEOPLE

Formalize A-player scorecards and quarterly talent reviews — your People score is the biggest lever right now.

EXECUTION

You flagged hiring as a constraint — stand up a proactive recruiting pipeline before you need it, not after.

CASH

Cash is converting slowly. Map your cash-conversion cycle and pick one lever (deposits, billing cadence, or terms) to shorten it this quarter.

Keep scaling, Dana.

You've completed your assessment. Turn these results into a 90-day plan with your Scaling Up Certified Coach.

SAMPLE · SCORED RESULTS EMAIL — RENDERED FROM THE SHIPPED CODE

The recommendations now ride along in the email

A real render, not a mockup: the full scored report followed by a "What to work on next → Your recommendations" block, pulling each person's answer-driven recommendations — including the

slider-based ones the on-screen report leaves out. This is the sample I'd send you to review before switching it on.

SCALING UP

Leadership Vision Alignment

Report for Marcus Lee · July 8, 2026

Dear Marcus, here is your report — your own answers, organized by theme.

WHAT TO WORK ON NEXT

Your recommendations

VISION FOR THE FUTURE

Your vision is clear but under-communicated — put a short quarterly all-hands on the calendar to re-anchor the team.

ORGANIZATIONAL STRENGTHS

Culture is a strength to protect — name the two behaviors you never compromise on and make them part of hiring.

Vision for the Future

What is the single most important goal for the next 3 years?

Triple revenue to \$30M while keeping the team under 60 people.

SAMPLE · QUALITATIVE (LVA) RESULTS EMAIL

For qualitative instruments, recommendations lead — answers follow

Same feature, different shape: on a qualitative report the recommendations render **before** the person's own answers, so they're the first thing read and never get cut off by email length limits.

- **Recommendations reach people where they read** Staged

The email now carries the same recommendations as the report — including the slider-based ones, which matters for the bigger scored instruments. Built and in production, but behind an off switch until you say go.

- **Authoring gets a "test a value" preview** Live now

When you write a recommendation in the editor, you can type a sample answer and instantly see which recommendation text would fire — using the exact same logic a real submission runs, so what you preview is what a client will get. No more authoring blind.

WHY IT'S STILL OFF

The results email is a live send path — flipping this on changes what real people receive the moment it's enabled. So it's staged deliberately. **Say the word and I'll send you a real sample email first** (one scored, one qualitative) before it reaches any client.

- **LIVE ON PRODUCTION**

4 · A small editor fix

Sections added while editing a template weren't being saved with their position, so a new section could silently fail to publish or lose its order. Fixed — new sections now publish and keep the order you put them in.

THE THROUGH-LINE

The features are all live — now the work is making them trustworthy.

Problems surface early instead of hiding in a log, the editor only ever shows real data, and the recommendations you author reach people in their inbox, not just on a screen they may never revisit.

Roadmap — the next targets

Committed next work, in the order I'll take it, each with its intended end-state shown and a clear "**done when.**" Targets, not open-ended promises — and the two defects below are real gaps in the live product today, not hypotheticals.

1 Recommendations go live in the inbox

Ready — awaiting your OK

Flip the switch so the recommendation emails shown in section 3 actually send — to both the respondent and their referring coach.

Done when: you approve the sample email above → I flip the flag → a real send is verified landing in an inbox for both recipients.

2 The three "coming soon" admin pages become real

They 404 today

Organizations, Campaigns and **Public Quizzes** are dimmed "(coming soon)" in the assessments nav right now — and clicking them hits a dead-end 404. Target: build the real pages from the Phase-2 blueprint below so the whole nav works end-to-end. **Done when:** every nav item routes to a working page — no dead ends.

TARGET DESIGN · ADMIN SURFACE (PHASE-2 BLUEPRINT)

The nav where Organizations + Public Quizzes are real destinations

The dimmed placeholders become working pages sitting alongside Templates and Assessments — this is the intended end-state, not a live screen yet.

3

Fix the template row actions (View vs Edit)

Bug today

On the Templates list, the template name, **View** and **Edit** all open the exact same URL — three controls, one destination. Target: **View** → a read-only detail, **Edit** → the editor, and drop the redundant control.

Done when: View and Edit lead to distinct, correct destinations.

Still waiting on you (external — none of it blocks the above):

A The real LVA peer-average numbers

The file shared held sample exports, not peer data. The panel to enter them is live — it just needs the actual averages. Reports stay peer-free until then, by design.

B Three small copy / wording clarifications

Minor invite and label wording — carried over from earlier. None of it blocks anything that's shipped.

Waves Y · W-cleanup · U3 — shipped 2026-07-07 / 07-08, all live in production.

Gated pipeline: design → dual review → adversarial pass → tests · 5,600 passing
